

Heymann`s Aluminium Ski Box

... elegant and light weight with many practical features

Ski box:

The box can be loaded through a wide opening door. A variable, pivoting carrier system allows the box to be loaded with up to 50 pairs of skis including poles, snowboards or anything else for which space is not available in the interior of the bus. Our aluminium ski box is a universal design for all makes and models.

- Width approx. 2250 mm,
- height approx. 1750 mm,
- depth approx. 650 mm for a total carrying capacity of approx. 2,5 qm with an intrinsic weight of only approx. 100 kg

The smaller version of our ski box with dimensions of

- Width approx. 1950 mm,
- height approx. 1650 mm,
- depth approx. 500 mm is ideal for your small bus.
- We supply the box in all RAL colors. METALLIC finish, design and lettering available as special features. Please request an offer.
- System and design patented, TÜV approved.

Our specialty is auxiliary and conversion equipment for overland coaches. From our manifold range we recommend our newly designed ski transport box. Our ski box is not a provisional aid; it is perfectly styled to match the overall appearance of your coach harmoniously. Our light-weight box is a pure aluminium construction using state-of-the-art technology and modern materials (some from aeronautics) produced in our own facilities.

Two side handles and four guide rollers ensure easy handling when installing and removing. The box can be pivoted to the side for maintenance work in the engine compartment. A roller frame is provided for this purpose.
